

# Botox

Botox is the number one cosmetic procedure in the United States. The Botox product, medically known as Botulinum Toxin Type A, is a prescription medicine that is injected directly into the muscles to block nerve impulses, which essentially paralyzes the muscle and stops the contraction. "Basically, Botox blocks the signals that would normally tell your muscles to contract".

Botox procedure is our specialty. All Botox treatments are performed by our Board Certified nurse practitioners who acquired advanced training. You will always receive maximum strength, fresh BOTOX. Although individuals may have slightly varied results, we will work with you to achieve your most optimal results.
